A full-stack developer

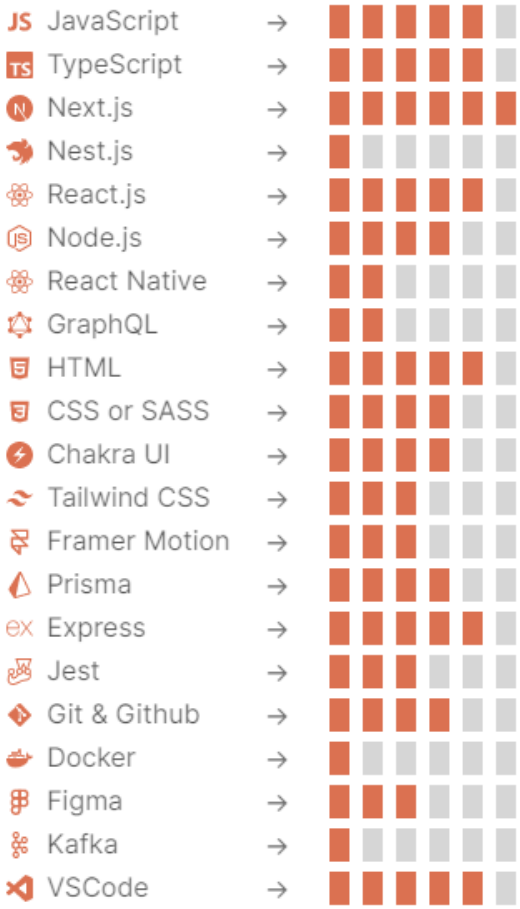
Resume

I live in Brazil (Macau – RN) and finished computing technical high school in IFRN - MC in 2022. During this period, I dedicated myself to software development with technologies like React.js, Next.js, and Node.js. After finishing the Ignite course of the Rocketseat, I got a full scholarship in Do While 2021.

My favorite framework is Next.js. Some of his features, mainly those related to the page rendering methods, like the SSR (Server-side Rendering), SSG (Static Site Generation), CSR (Client-side Rendering), and the ISG (Incremental Static Generation) allows a better user experience and that suits a variety of use cases. Furthermore, using serverless functions I can deploy the ecosystem of my small projects in a practical and fast way without the necessity of breaking apart the Front-end of the Back-end.

I'm willing to expand my knowledge and learn new things. I've been following this path for at least three years.

Technologies



Competencies

- I know and have used agile methodologies;
- I've experienced a variety of deployment options;
- I understand the database's entity relations;
- I develop responsively;
- I make animations with Framer Motion;
- I can find and resolve errors myself.

Soft skills

- Fast reasoning;
- Dedication;
- Constant learning;
- Objectivity.

Courses and certificates

- Do While 2021 – Rocketseat – Jan. 2022
- Ignite: React.js – Rocketseat – Dec. 2021
- IoT – Cisco Network Academy – Dec. 2020
- Omnistack Week 11 – Rocketseat – Mar. 2020

Languages

- Portuguese – native;
- English – technical:
