A full-stack developer

Resume

I studied computing in IFRN - MC and finished the technical high school level in 2022. On this period, decided to dedicate to the software development, and I've been studying until then technologies like React.js, Next.js and Node.js. JavaScript with TypeScript, on general. I completed the trail of React.js in Ignite course of the Rocketseat and got a complete scholarship some later. I know a lot of the Node.js too.

My favorite framework is Next.js, together we can: make amazing pages with SSR (Server-side Rendering), SSG (Static Site Generation) and CSR (Client-side Rendering) – used to make SPA (Single-page Applications); use serverless functions and reduce deployment cost; revalidate on demand of some pages with the latest resources (v12.1.0); and play with React.js without missing out on his incredible experience.

Furthermore, I've a dream: get my first job to put my skills into practice. For this, I'm willing to expand my knowledge and learn new things. I've been following this path for at least 3 years.

Technologies

- JavaScript
- TypeScript
- Next.js
- React.js
- Node.js
- HTML
- CSS or SASS
- Declarative interfaces
- Framer motion
- Prisma
- Git & Github
- VS Code

Competencies

- Agile methodologies' knowledge;
- Experience with many deploy options;

- Database's entities relations knowledge;
- Ready to do responsive;
- Framer motion animation's knowledge.

Soft skills

- Fast reasoning;
- Dedication;
- Constant learning;
- Objectivity.

Courses and certificates

- Do While 2021 – Rocketseat – Jan. 2022
- Ignite: React.js – Rocketseat – Dec. 2021
- IoT – Cisco Network Academy – Dec. 2020
- Semana Omnistack 11 – Rocketseat – Mar. 2020

Languages

- Portuguese – fluent;
- English – technical:

    Without real listening or speaking experience.
